Why partner with Tyrrell Products?

We are the partner you need when scaling the IoT and BMS world. Our highly skilled team develop, design and engineer solutions for you to take, distribute and deploy to your customers, meaning you can spend more time offering a full solution instead of pricing up and building your own jobs.

Want access to support with knowledgeable and friendly support team?

We offer extensive support on all products and solutions we sell. If you're on site or in the office, we are on hand straight away to offer support by phone, email or online. We also have all of our datasheets online so you can get the answers you need quickly to your technical questions.

Use the best products in the industry

We offer a wide range of IoT and BMS products, giving you the confidence to take on challenging jobs further your engineers. Our highly knowledgeable and helpful sales team can advise what product or solution will best suite your needs and help you get your job finished.

Offering uncompromised training with a 100% Niagara 4 Training pass rate!

We are an Official Tridium Certified Training Centre offering BIA award nominated training to budding engineers wanting to expand their knowledge, move into the IoT world and bring a new level of expertise to their skills and company. We also offer training on our own products and intelligent building solutions such as CrossTalk3.1, our integrated fire alarm reporting system to video door entry and more.

About Tyrrell

Tyrrell Products started in 2011, creating and building the best hardware and software for the IoT & building automation world.

With a great team of developers, we have created software such as CrossTalk3.1, our integrated fire reporting and management system. This state of the art fire reporting system allows building managers to integrate different fire panels with different systems, all into one customizable interface. With this, we have not only helped buildings and sites save money on calling out personal to test

fire/smoke alarms, but also become a lot safer and comply with building regulations.

We are experts at working with the Tridium Niagara Framework. Tridium is a world leader in business application frameworks, advancing truly open environments that harness the power of the Internet of Things. We give you the power to integrate CCTV, heating, lighting and more into one powerful system.

If you want to further your engineers and help them gain

a good solid foundation of expertise that is required to efficiently design, engineer and program projects, we offer an introduction to Tridium and Official Niagara 4 Training.

As Niagara becomes the building IoT and integration solution of choice, it has led to a desire to integrate already installed Trend systems. We developed two drivers to use Niagara 4 on a Trend system or Emulate Trend so you can link a JACE to Trend 963.

Lets start integrating intelligent buildings today!

Our Intelligent Building Solution

Supplying the world with intelligent building hardware

Tyrrell Products are the partner of choice within the intelligent building world. We are of the leading Tridium distributors in the UK, developing, supplying and supporting our own drivers, apps and complimentary products to over 40 system integrators.

As we grow and develop the world of intelligent buildings, we are always coming up with new solutions.

Not all business's or buildings need a full scale building management system, which is why we have created our new eBMS/Midi range. This is a range of low cost sensors moniotring everything from air quality, fridge temperature, temperature, motion and smoke.

What Tyrrell Products can offer you.

Development

Our amazing team have developed software from

CrossTalk3.1 to Trend Drivers to give our partners the edge over their competitors.

Training

We are an official Tridium partner and training

provider, so if you need training on anything BMS or IoT related, we have always got your back.

Support

Our partners only receive the best support possible.

Once you become a Tyrrell partner, we make sure you have the tools to complete every job.

Keeping you ahead

For you to deliver defying intelligent building solutions, it's important your engineers have the right skills and access to quality training and guides. Nominated for the BCIA Awards 2019 and 2020, we are the only authorised Tridium training centre with a 100% pass record. We run training courses from our UK office by our own Technical Director, Rob Heathcock. With this advanced

training, you and your engineers can take off into the world of IoT and BMS, building and pricing complex yet cutting edge intelligent buildings.

We also offer training on Periscope, our video door entry system, HVAC systems, upgrading Tridium AX to N4 and even E-learning for your Niagara 4.8 analytics.

1.

Discuss your requirements

When you get asked to quote a project or if you just need a one off module, simply just call our sales team and they will assist you with your project requirements, help you choose the right parts and advise the best solution.

2.

We help you find what you need

Once we understand your requirements for your project, our expert sales team will help you get the parts you require. If you already know what products you need, just enter in the part code from our product brochure on our website and get all the information and pricing you need.

3.

You complete the job with the best equipment

Once we understand your requirements for your project, our expert sales team will help you get the parts you require. If you already know what products you need, just enter in the part code from our product brochure on our website and get all the information and pricing you need.
